Blocklist Removal Center

IP Address Lookup

This Lookup tool is **only** for IP Addresses - do not enter domains or email addresses. If you do not know what an IP address is, or what IP to look up, please contact your Internet Service Provider and ask them to help you.

ADVANCE NOTICE: The Blocklist Removal Centre is having a refresh. The updated version will be going live in early February.

IP Address Lookup Tool. This lookup tool checks to see if the **IP Address** you enter is currently listed in the live Spamhaus IP blocklists: **SBL, XBL and PBL**.

Enter an **IP Address** 88.225.70.13

Lookup

If your IP address is listed on one of our IP blocklists; SBL, XBL or PBL (collectively known as the 'Zen' blocklist), this lookup tool will tell you which one and will give you a link to information on what to do.

Domain Lookup

This Lookup tool is **only** for Domains (not IP Addresses). The DBL only lists domains currently involved in abuse, therefore it is unlikely that normal domains will be on the DBL.

Domain Lookup Tool. This lookup tool checks to see if the **Domain** you enter is currently listed in the live Spamhaus Domain Blocklist (**DBL**).

Enter a **Domain Name**

Lookup

If your Domain is listed on the Spamhaus Domain Blocklist (DBL), this Lookup tool will give you a link to information on what to do.

Help

► I don't understand
what to do about this?

Ref: PBL1525571

88.225.0.0/17 is listed on the Policy Block List (PBL)

Outbound Email Policy of The Spamhaus Project for this IP range:

This IP address range has been identified by Spamhaus as not meeting our policy for IP addresses permitted to deliver unauthenticated 'direct-to-mx' email to PBL users.

Important: If you are using any normal email software (such as Outlook, Entourage, Thunderbird, Apple Mail, etc.) and you are being blocked by this Spamhaus PBL listing when you try to send email, the reason is simply that **you need to turn on "SMTP Authentication"** in your email program settings. For help with SMTP Authentication or ways to quickly fix this problem [click here](#).

See also: <http://www.spamhaus.org/faq/section/Spamhaus%20PBL>

Removal Procedure

If you are not using normal email software but instead are running a mail server and you are the owner of a Static IP address in the range **88.225.0.0/17** and you have a legitimate reason for operating a mail server on this IP, you can automatically remove (suppress) your static IP address from the PBL database.

[Remove an IP from PBL](#)

Açılan sayfadan "Remove an IP from PBL" tıklanır

PBL Self-Service IP Removal

Automatic removal mechanism for single Static IP addresses

This function allows mail server operators with Static IP addresses listed on the PBL (such as IPs within a range previously identified as Dynamic but which has been recently reassigned as Static) to automatically remove their Static IP addresses from the PBL database.

Before removing an IP address from the PBL database you must understand this:

▶ THE PBL IS NOT A BLOCKLIST. You are not blocklisted for spamming or for anything you have done. The PBL is simply a list of ALL of the world's end-user broadband IP space, i.e: IP space normally assigned to broadband/ADSL customers. It is perfectly normal for dynamic IP addresses (DSL, DHCP, cable, dialup) to be listed on the PBL. In fact all IP addresses in the world which are not designated mail server machines *should be* on the PBL.

The PBL does not prevent you sending email unless your email program is not authenticating properly when it connects to your ISP or company's mail server. This can happen if you have forgotten to turn on 'Authentication' in your 'outgoing mail' account settings, or if the username/password your email program is giving to your outgoing mail server is wrong.

If you are using a normal email program, such as Outlook, Entourage, Thunderbird, Apple Mail, and you are being blocked by a Spamhaus PBL listing when you try to send email, the reason is simply that **YOU NEED TO TURN ON 'SMTP AUTHENTICATION'** in your email program's account settings. See: [How do I turn on SMTP Authentication?](#)

- ▶ You should only remove an IP address from the PBL if (A) the IP address is Static and has proper Reverse DNS assigned to your mail server, and (B) if you have a specific technical reason for needing to run a 'direct-to-MX' email service, such as a mail server appliance, off the Static IP address. In all other cases you should NOT remove an IP address from the PBL.
- ▶ By removing your IP address from the PBL database you are assuming responsibility for any Spam that may later originate from the IP address. If spam is then detected from an IP address excluded from PBL, it may be listed in SBL or XBL under the criteria of those lists.
- ▶ When requesting a removal, do NOT give a Freemail or free webmail address (such as @gmail.com, @hotmail.com, @yahoo.com, etc). The PBL system does not process removals from freemail accounts (the system will simply discard any removals you make if you use any 'freemail' address). Always use your real address and your own domain.
- ▶ You can not remove an IP address that is also listed in another Spamhaus database (such as SBL or XBL) due to other existing spam issues. You can not remove an IP address that has been set to 'non-removable' by your ISP. In this case you need to contact your ISP to resolve the issue.
- ▶ Removed IP addresses are not actually deleted from the PBL master database, instead they are added to a suppression database which removes the IP address from the current PBL zone build. You can only remove one IP address. Safeguards are built in to prevent abuse of the removal facility by spammers (and particularly by automated bots).

“Finish” e tıklanıp ile işlem tamamlanır..

PBL Advisory

Removal Control: Request Accepted

The IP address has been added to the PBL Removals database. Please allow 30 minutes for servers around the world to update their data. Under normal circumstances, in approximately 30 minutes you should be able to send email directly to networks that use Spamhaus' Policy Block List system.

Note that the PBL Removal System will now automatically run a check on the removed IP address and **will re-activate the PBL listing** if the IP address is found to be dynamic, not a real mail server, having any history of sending spam, or if it appears infected with a virus/trojan.
